QA TESTER

The Role

We are looking for a QA Tester with at least 2-3 years' experience of testing web applications and software. You enjoy problem solving and want to be part of a close-knit team within an Agile/Scrum environment. You care about the quality of your output and are open to others help and critique that will allow us to achieve consistent high standards throughout the team. You will be testing across web applications and APIs, working with and challenging product owners and developers to improve test coverage and to discover untested scenarios. You will bring new ideas to the team and build on the QA framework.

We are looking for

You have strong-problem solving skills, positive energetic approach with great communication skills. You will be testing across websites and APIs, working with our team by

- Monitoring code builds to enable developers to keep high unit test coverage across our repositories
- Discovering untested scenarios
- Working with the development team and product owners to feed automation requirements into the sprint backlog

You will be stretched and able to apply what you are learning to see better use of technology in our products. You want to be part of a team who will support you in growing, experimentation and sharing success in your discoveries.

Your skills

- Analytical validation of product requirements
- Experience formulating test cases
- Manual and Automated test planning
- Test execution
- Communicating with Product Owners and Developers

It would be nice if you also have experience with: Agile methodologies, Continuous Integration, Selenium WebDriver.

How we invest in our team

Regular team sessions including

- Mentoring time
- Regular Team Training and Ideas Lunches

Benefits

- Competitive salary
- Flexible working environment
- Great office location in Bath near to the Train Station
- Equity through our share scheme
- 25 days holiday
- Pension
- Life Assurance
